

## ABSTRACT OF THE INVENTION

The present invention is to provide a compact and easy-to-use hand-held communication electronic apparatus, which comprises a main housing having a display screen and control keys on the surface thereof; a first sliding keypad being  
5 combined with the main housing by means of a first rail, so that the first sliding keypad not only can be stored behind and parallel to the main housing, but also can be slid out from the bottom of the main housing; a second sliding keypad is combined with the first sliding keypad by means of a second rail, so that the second sliding keypad not only can be stored behind and parallel to the first sliding keypad,  
10 but also can be slid out from the side of the main housing.
